# Value Proposition · Royva

**Foshan Ruibang Xinsheng Medical Instrument Co., Ltd.** is the first factory in China to produce ultra-clear oral mirror series products. We are a company integrating R&D, production and trade. Ruibang Xinsheng Medical adheres to innovation and sustainable development with the aim of **"Craftsmanship and Intelligence"** high level oral equipment as well as commitment to enhance the comfort of clinical oral diagnosis and treatment. We aim to provide dealers and dentists around the world with high-quality and stable products and prices with market advantages, so that our customers can use them with peace of mind and no worries after the sale. We will realize win-win situation with dealers from all over the world and contribute to the development of dental equipment. We welcome customers from all over the world to visit us and look forward to your arrival!

# ROYVA MIRRORS

Industry-Leading Optical Performance

## ■ Complete Solutions for Every Clinical Need

Royva's comprehensive portfolio covers all dental specialties: Pediatric Dentistry / Root Canal / Orthodontic Surgery / Implant Surgery / Aesthetic Prosthetics / Microsurgery

## ■ True-Color Reflection & No Overlapping Imaging

Front-surface reflection technology eliminates double images, Clinical-grade color reproduction for the most realistic intraoral surgical environments.

## ■ Pixel-Perfect Detail

From microfractures to subgingival margins, experience true 1:1 detail fidelity with zero distortion.

## ■ 96% Ultra-High Reflectivity

Engineered with 30+ nano-optical coatings, Royva mirrors deliver unmatched brightness—40% higher reflectivity than traditional rhodium mirrors—ensuring optimal visibility even in challenging lighting conditions.

# PRISM PRO SERIES

Precision in reflection, Perfection in measurement

# ROYVA PRISM PRO

Precision in reflection, Perfection in measurement

---

## NEW DESIGN

The Royva Prism Pro series has been upgraded with an ergonomic handle for better grip and autoclavable for greater durability, providing unparalleled comfort for extended periods of operation. Its high-definition front surface mirror eliminates glare and ghosting, while the built-in measuring scale at the end of the handle delivers millimeter precision to optimize endodontics treatments. Optical excellence meets clinical innovation.

---

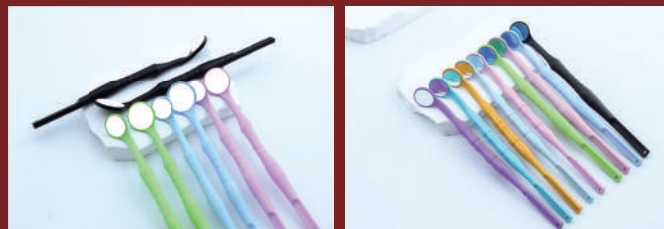

Ultra-clear imaging without overlapping images.

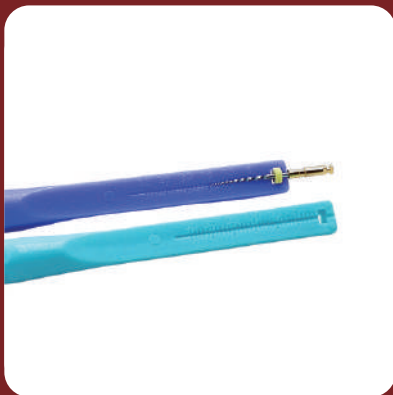

---

More efficient treatment with endo gauge handle.

---

Upgraded material, more resistant to autoclavable.

## CLEAR IMAGING AND VIVID COLORS

/1:1 reproduction of the most natural colors.

/Ultra - high refractive index higher than 96%.

/High temperature and high pressure resistance for sterilization.

# SHINING BLACK PREMIUM SERIES

Where hydrophobic tech meets surgical precision

# SHINING BLACK PREMIUM SERIES

Where hydrophobic tech meets surgical precision

---

## LOTUS EFFECT

The perfect combination of precision and innovation. Its hydrophobic coating instantly repels liquids for easy cleaning, while the deep black aluminum avoids glare under surgical lights. Designed for flawless clarity during surgery, it can be adapted to work with higher precision clinical procedures.

---

Deep black finish eliminates any reflection of interfering light.

---

Multiple sizes available for a full range of clinical operations

---

Nanoscale hydrophobic coating technology

## SHINING BLACK SERIES

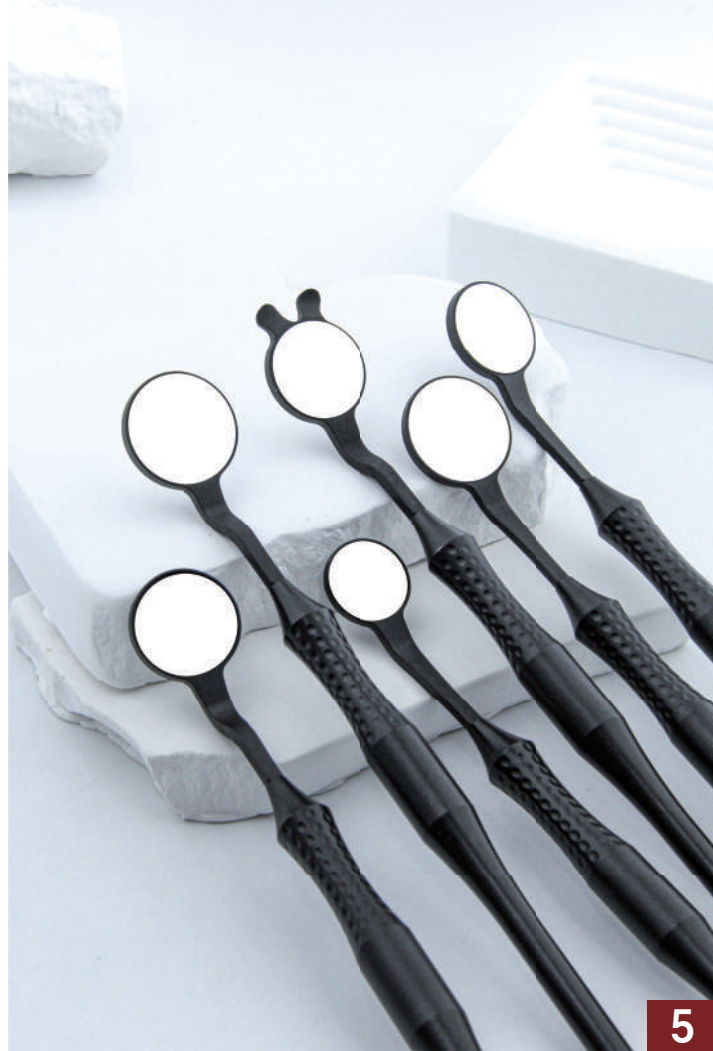

/Superior clarity

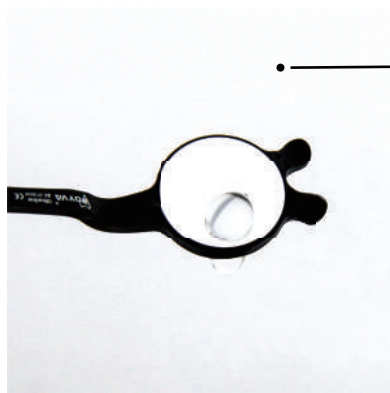

/Slimmer and more compact working end

/Multiple models for different surgical scenarios

/Aluminum alloy material is more resistant to autoclavable

/Application of hydrophobic coatings for performance enhancement

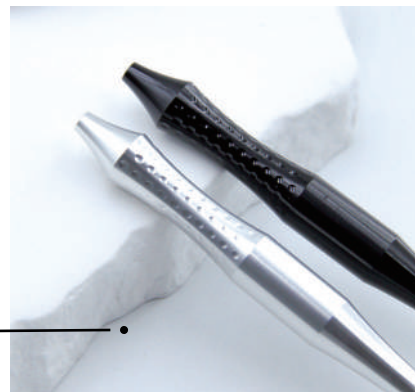

## HYDROPHOBIC COATING TECHNOLOGY

### Exclusive hydrophobic coating

The Royva Ultra Clear mirrors are all coated with nanoscale hydrophobic coating to reduce the negative impact of water spray on clarity. At the same time, ultra-thin nano-coating technology keeps the mirror surface's visual effect unchanged while increasing the mirror's wear resistance.

## ROYVA ERGO GRIP

All aluminum alloy is resistant to high temperature and autoclave sterilization.

A deep black finish eliminates any reflection of interfering light, preventing reflections that can interfere with vision under a magnifying glass or microscope.

a new era in microsurgery

# FLEXIMIRROR KIT

Microscopic precision, bendable working end, a new era in microsurgery

---

## Flex and SEE

Upgraded bendable material of tip adapts to surgical needs for blind-spot-free access. Ultra-thin design minimizes obstruction. Perfect for precision micro-dentistry. Includes 4 interchangeable tips for versatile surgical applications.

---

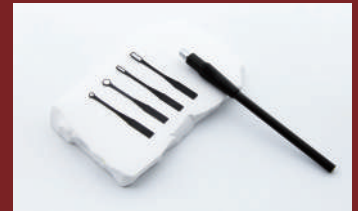

Upgraded ultra-thin working end for easier access to narrow surgical areas

---

The curved working end makes it easy to obtain a view of the operative field

---

Specially developed for microsurgery

# FLEXIMIRROR KIT

The Royva FlexiMirror Kit, with its ultra-thin design and bendable material for the working end, allows easy access to complex areas for truly blind-spot-free treatment. The kit includes 4 different types of mirrors for more comprehensive surgical treatments. This innovation is the perfect combination of precision and flexibility!

Bendable working tips

## Detachable Design

Revolutionize the traditional mouth mirror connection handle design & work, so that installation and disassembly are faster. Say goodbye to traditional cumbersomeness—efficient and time-saving operation!

# LED FOG FREE MIRROR

Patented led design + dual airflow tech = always perfect clarity

# LED FOG - FREE MIRROR

Patented led design + dual airflow tech = always perfect clarity

---

## PATENTED DESIGN

Patented design to illuminate every corner. Hydrophobic coating + dual airflow instantly removes water and fog for clarity. Ensures a clear view of the mirror at all times.

---

Hydrophobic Mirror Combined with Dual Airflow Design Eliminates the Effects of Water Misting

---

Self - Illuminated LED Function for Intraoral Illumination

---

Magnetic Mirror Replacement for Easier and Safer Operation

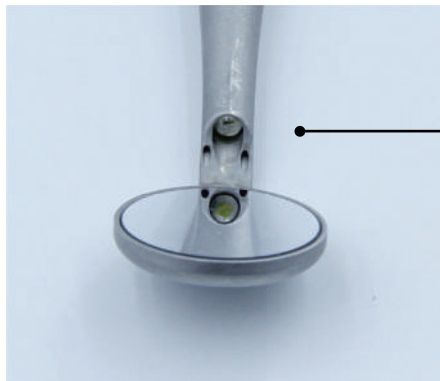

# FOG FREE MIRROR

/Self-illuminated design to illuminate the inside of the mouth

/Dual airflow design removes surface water mist

/Patented design incorporating clinical needs

/Ultra-clear specular reflection

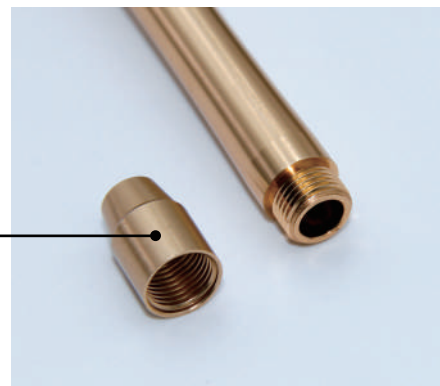

## FAST DEFOG DESIGN

The mirror body is designed with double airflow holes to realize the rapid dissipation of water mist on the mirror surface. The two airflow holes work together to dramatically reduce the buildup of water mist, ensuring a consistently clear intraoperative field of vision. Provides more efficient and stable support for the dentist's operation.

## SELF ILLUMINATED DESIGN

Royva LED Fog free mirror adopts self-illuminated design without additional power supply, connected to the air source can be automatically lit, the light is soft and precise focus, with the doctor's hand operation flexible movement, direct illumination of the affected area to enhance the clarity of the field of vision.

# SUCTION MIRROR

Mirror+Suction in One-More Space, Fewer Tools, Perfect View!

The combination of suction and mouth mirror can easily improve the situation of two-person, four-hand operation and provide a more reasonable space for operations.

3D saliva suction, quickly take away impurities and liquids, greatly improving work efficiency.

Disposable working head. Reduced sterilization costs and more hygienic.

# SUCTION MIRROR

Other suction mirrors will stop suctioning once more than half of the holes are exposed. The Royva Suction Mouth mirrors will continue to work as long as one of the holes is in contact with liquid, until all the liquid has been sucked out!

**ORDER NO:** RV-SM-II

**INCLUDED:** 50 disposable mirrors、1 aluminum handle、1 set of connecting hoses、1 silicone adapter (Strong suction/Weak suction)

# Tips for Cleaning and Sterilizing Mirrors

## The key to mirrors life

The lifespan of a mouth mirror is closely related to the doctor's handling habits and the nurse's cleaning and maintenance. Proper handling can effectively extend mirrors life and avoid unnecessary wear and tear.

## Cleaning Steps

1. Timely Cleaning: Immediately after use, clean with neutral cleaner to thoroughly remove saliva, blood and grease.
2. Gentle operation: avoid hard objects scratching during cleaning, focus on protecting the mirror surface.

## Packing Precautions

Separate handling: clean and pack separately to avoid collision with other instruments resulting in scratches on the mirror.

- Completely dry: Ensure that there is no liquid residue on the mirror and handle before autoclaving to prevent water corrosion or high temperature steam damage.

## High temperature recommended

Placement: It is recommended to place it on top of other instruments to avoid crushing.

Recommended parameters: 121°C, 15 min or 135°C, 4 minutes.

Temperature control check: Calibrate the temperature of the sterilizer periodically to avoid too high or too low affecting the sterilization effect or damaging the mirror plating.

## Small Reminder

Standardized operation not only protects the disinfection effect, but also reduces problems such as blurring of the mirror surface and peeling of the plating, making the mouth mirror more durable!

Details determine the life, standardized operation starts from every step!
